With respect to claim 1, in addition to other elements in the claim, prior art considered individual or combination does not teach a time series data dimensional compression apparatus, comprising: a time series subsequence generating section that generates time series subsequences of a specified segment width by which each of the plurality of pieces of time series data is divided; t performs singular value decomposition on all of the divided time series subsequences; generates dimensional compression time series data by using a specified number of high-order elements of the singular value decomposition as a representative value of each of the divided time series subsequences of the specified segment width.

With respect to claim 4, in addition to other elements in the claim, prior art considered individual or combination does not teach a time series data dimensional compression apparatus, comprising: determines a segment width to take a mean for each of the plurality of pieces of time series data of the specified length; generates an intermediate time series by using the mean value calculated as a segment representative value; performs the singular value decomposition on each intermediate time series; and a dimensional compression time series data generating section that

uses a specified number of high-order elements of the singular value decomposition as compressed data of the intermediate time series.
